4    Everything here works just like it does when you're running Tailwind locally
5    with a real build pipeline. You can customize your config file, use features
6    like `@apply`, or even add third-party plugins.
7
8    Feel free to play with this example if you're just learning, or trash it and
9    start from scratch if you know enough to be dangerous. Have fun!
